## Sailpoint Installation Steps ( IdentityIQ 7.3 Installation in Windows Machine)

December 03, 2018

This document helps you set up Sailpoint IdentityIQ 7.3 in Windows Operating System

### Softwares Required:

1.

MySQL 5.6 server

[Click here to download](#)

2.

Apache Tomcat 9.0

[Click here to download](#)

3.

Java JDK 1.8 and above

[Click here to download](#)

4.

Sailpoint IdentityIQ 7.3 application

You may require to login into Sailpoint community to [download](#)

Install the above softwares, update JDK, MySQL paths in environment Path variable

Note: If you are facing issue in MySQL service then try running below commands

mysqld --install

net start mysql

### Sailpoint Configuration Steps:

- 

Create an \identityiq directory under the Tomcat webapps directory:  
for example, C:\Program Files\Apache Software Foundation\Tomcat 9.0\webapps\identityiq

- 

Unzip the identityiq-7.3.zip file.

Copy identityiq war file to the

Copy identityiq.war file to the

C:\Program Files\Apache Software Foundation\Tomcat 9.0\webapps\identityiq

Run below command to extract identityiq.war

**jar -xvf C:\Program Files\Apache Software Foundation\Tomcat 9.0\webapps\identityiq\identityiq.war**

- 

Create the database schema:

- 

In the command prompt window, change to the

C:\Program Files\Apache Software Foundation\Tomcat 9.0\webapps\identityiq\WEB-INF\bin directory

- 

Enter **iiq schema** to create the schema

- 

Create the database from the schema

- 

In the command prompt window, change to the

C:\Program Files\Apache Software Foundation\Tomcat 9.0\webapps\WEB-INF\database directory

- 

Log in to MySQL by typing **mysql -u root -p** followed by your MySQL password

- 

Run this command to load the schema into MySQL:

**source create\_identityiq\_tables.mysql**

- 

Check that the database was created by typing **show databases;**

You should see identityiq listed among the databases (there will be other databases listed; these don't matter for IdentityIQ).

- 

Type quit to exit MySQL.

- 

Navigate to the \tomcat\webapps\identityiq\WEB-INF\bin directory

- 

Launch the iiq console by running this command: **iiq console**

Allow the console a few moments to launch.

The console is running when you see a > symbol in the command prompt.

- 

In the IdentityIQ console, run this command:

**import init.xml**

```
import init-lcm.xml
```

### Import init-lcm.xml

- When the import is complete, type quit to exit from the IdentityIQ console.

- **Restart Tomcat Server**

Login to Identity IQ at **<http://localhost:8080/identityiq/>** with spadmin/admin credentials

IIQ7.3

Sailpoint

**Unknown** 15 May 2019 at 08:28

Hello Ravi,

Do you have a broken down step by step procedure for the IIQ 7.3p2 patch, it appears quite complex.
